Thank you…

Thank you for purchasing a Mark-10 WT3-200 wire terminal pull tester, designed for pull test applications up to 200 lbF (1,000 N).

With proper usage, we are confident that you will get many years of great service with this product. Mark-10 instruments are ruggedly built for many years of service in laboratory and industrial environments.

This User’s Guide provides setup, safety, and operation instructions. Dimensions and specifications are also provided. For additional information or answers to your questions, please do not hesitate to contact us. Our technical support and engineering teams are eager to assist you.

Before use, each person who is to use the WT3-200 should be fully trained in appropriate operation and safety procedures.

1.2 Safety / Proper Usage

Caution!
Note the tester's capacity of 200 lbF [1,000 N]. Producing a force greater than 150% of capacity can damage the internal load cell. An overload can occur whether the tester is powered on or off.

Typical materials able to be tested include many manufactured items, such as wires, tubing, and other samples. Items that should not be used with the tester include potentially flammable substances or products, items that can shatter in an unsafe manner, and any other components that can present an exceedingly hazardous situation when acted upon by a force.

The following safety checks and procedures should be performed before and during operation:

1. Never operate the tester if there is any visible damage to the AC adapter or the tester itself.
2. Ensure that the tester is kept away from water or any other electrically conductive liquids at all times.
3. The tester should be serviced by a trained technician only. AC power must be disconnected and the tester must be powered off before the housing is opened.
4. Always consider the characteristics of the sample being tested before initiating a test. A risk assessment should be carried out beforehand to ensure that all safety measures have been addressed and implemented.
5. Wear eye and face protection when testing, especially when testing brittle samples that have the potential to shatter under force. Be aware of the dangers posed by potential energy that can accumulate in the sample during testing. Extra bodily protection should be worn if a destructive failure of a test sample is possible.
6. In certain applications, such as the testing of brittle samples that can shatter, or other applications that could lead to a hazardous situation, it is strongly recommended that a machine guarding system be employed to protect the operator and others in the vicinity from shards or debris.
7. When the tester is not in use, ensure that the power is turned off.
2 POWER

The tester is powered either by an 8.4V NiMH rechargeable battery or by an AC adapter. Since these batteries are subject to self discharge, it may be necessary to recharge the unit after a prolonged period of storage. Plug the accompanying charger into the AC outlet and insert the charger plug into the receptacle on the tester (refer to the illustration below). The battery will fully charge in approximately 8 hours.

Caution!
Do not use chargers or batteries other than supplied or instrument damage may occur.

If the AC adapter is plugged in, an icon appears in the lower left corner of the display, as follows:

If the AC adapter is not plugged in, battery power drainage is denoted in a five-step process:

1. When battery life is greater than 75%, the following indicator is present: ⚡
2. When battery life is between 50% and 75%, the following indicator is present: ⚡
3. When battery life is between 25% and 50%, the following indicator is present: ⚡
4. When battery life is less than 25%, the following indicator is present: ⚡
5. When battery life drops to approximately 2%, the indicator from step 4 will be flashing. Several minutes after (timing depends on usage and whether the backlight is turned on or off), a message will appear, “BATTERY VOLTAGE TOO LOW. POWERING OFF”. A 4-tone audio indicator will sound and the tester will power off.

The tester can be configured to automatically power off following a period of inactivity. Refer to the Other Settings section for details.

If battery replacement is necessary, the battery may be accessed by removing the sheet metal cover on the underside of the base.
3 SETUP

3.1 Assembly
The lever is shipped disassembled from the unit to prevent damage in transit. To install, match the pin on the cam mechanism with the corresponding blind hole in the lever hub. Then, tighten the plastic knob into the threaded hole in the lever hub.

3.2 Mounting
Place the tester on a clean, flat and level work area free from vibration. If desired, the tester can be secured to the work area with four 1/4-20 screws fastened into the underside of the base.

3.3 Sample setup

1. Secure the terminal into the standard terminal fixture or optional ring terminal fixture, as shown in the figures below. Index the fixtures until the desired slot or ring size is aligned with the cam mechanism adjacent to the lever. The fixtures will click when indexing to each size selection.

2. Rotate the lever clockwise until its end of travel.

3. Insert the loose end of the wire between the cams in the mechanism adjacent to the lever, as shown in the figure below. Keep the wire taut as it is inserted.

4. Rotate the lever counter-clockwise to engage the loose end of the wire, as shown in the figure below. Continue rotating to produce force on the sample. The lever will reach its end of travel before contacting the keypad / display housing.
5. When the test is complete, rotate the lever clockwise until the end of travel. The cams will open and the wire will be released.

3.4 Installing the ring terminal fixture
To install or uninstall the standard terminal fixture or optional ring terminal fixture, loosen the screw in the center of the fixture, remove, place the other fixture in the receptacle, and re-tighten the screw.
## 4 HOME SCREEN AND CONTROLS

### 4.1 Home Screen

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1   | Tension / compression indicator | - Tension (pull) direction.  
- Compression (push) direction. Not typically used. These indicators are used throughout the display and menu.                                                                                                    |
| 2   | Peak                           | The maximum measured tension force. This reading can be reset by pressing ZERO or by powering the tester off and on.                                                                                                                                                                                                                   |
| 3   | Primary reading                | The current displayed reading. See Operating Modes section for details.                                                                                                                                                                                                                                                                  |
| 4   | Units                          | The current measurement unit. Abbreviations are as follows:  
- lbF – Pound-force  
- ozF – Ounce-force  
- kgF – Kilogram-force  
- N – Newton  
- kN – Kilonewton                                                                                                                                                                                                                                                  |
| 5   | Load bar                       | Analog indicator to help identify when an overload condition is imminent. The bar increases from left to right, indicating increasing load. If set points are enabled, triangular markers are displayed for visual convenience. This indicator reflects the actual load, which may not correspond to the primary reading (depends on operating mode). The ZERO key does not reset the load bar. See Operating Modes section for details. |
| 6   | Mode                           | The current measurement mode. Abbreviations are as follows:  
- RT – Real Time  
- PK – Peak  
- BRK – Break Detection  
See Operating Modes section for details about each of these modes                                                                                                                                                                                                 |
| 7   | Number of stored data points   | The number of stored data points in memory, up to 1000. Displayed only if Memory Storage is enabled for the DATA key.                                                                                                                                                                                                                   |
8 Battery / AC adapter indicator
Either the AC adapter icon or battery power icon will be shown, depending on power conditions. Refer to the Power section for details.

10 High / low limit indicators
Correspond to the programmed set points. Indicator definitions are as follows:
- ▲ – the displayed value is greater than the upper force limit
- ■ – the displayed value is between the limits
- ▼ – the displayed value is less than the lower force limit

11 Set points
The programmed force limits. Typically used for pass/fail type testing. 1, 2, or no indicators may be present, depending on the configuration shown in the Set Points menu item.

4.2 Controls

<table>
<thead>
<tr>
<th>Primary Label</th>
<th>Primary Function</th>

<tr>
<td>DATA</td>
<td>Stores a value to memory, transmits the current reading to an external device, and/or initiates automatic data output, depending on setup.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4.3 Menu navigation basics
Most of the tester’s various functions and parameters are configured through the main menu. To access the menu press MENU. Use the UP and DOWN keys to scroll through the items. The current selection is denoted with clear text over a dark background. Press ENTER to select a menu item, then use UP and DOWN again to scroll through the sub-menus. Press ENTER again to select the sub-menu item.

For parameters that may be either selected or deselected, press ENTER to toggle between selecting and deselecting. An asterisk (*) to the left of the parameter label is used to indicate when the parameter has been selected.

For parameters requiring the input of a numerical value, use the UP and DOWN keys to increment or decrement the value. Press and hold either key to auto-increment at a gradually increasing rate. When the desired value has been reached, press ENTER to save the change and revert back to the sub-menu item, or press ESCAPE to revert back to the sub-menu item without saving. Press ESCAPE to revert one step back in the menu hierarchy until back into normal operating mode.

Refer to the following sections for details about setting up particular functions and parameters.
5 OPERATING MODES

Caution!
In any operating mode, if the capacity of the tester has been exceeded by more than 110%, the display will show “OVER” to indicate an overload. A continuous audible tone will be sounded until the MENU key has been pressed or the load has been reduced to a safe level.

Three operating modes are possible with the WT3-200. To cycle between the modes, press MODE while in the home screen.

5.1 Real time (RT)
The primary reading corresponds to the live measured reading.

5.2 Peak (PK)
The primary reading corresponds to the peak tension reading observed. If the actual force decreases from the peak value, the peak will still be retained in the primary reading area of the display. Pressing ZERO will reset the value.

5.3 Break Detection (BRK)
Arms the tester for automatic data output, automatic zero, and/or automatic data storage upon sample break, as configured in the Break Detection menu. This mode will only appear if enabled in the Break Detection menu.

6 CHANGING THE UNITS

The WT3-200 can display five different measurement units. To change the unit, select Units from the menu. The display will list the available units, as follows:

<table>
<thead>
<tr>
<th>UNITS</th>
</tr>
</thead>
<tbody>
<tr>
<td>* lbF</td>
</tr>
<tr>
<td>ozF</td>
</tr>
<tr>
<td>kgF</td>
</tr>
<tr>
<td>N</td>
</tr>
<tr>
<td>kN</td>
</tr>
</tbody>
</table>

The tester will always power on with the unit selected in this sub-menu.

7 DIGITAL FILTERS

Digital filters are provided to help smooth out the readings in situations where there is mechanical interference in the work area or test sample. These filters utilize the moving average technique in which consecutive readings are pushed through a buffer and the displayed reading is the average of the buffer contents. By varying the length of the buffer, a variable smoothing effect can be achieved. The selection of 1 will disable the filter since the average of a single value is the value itself.

To access digital filter settings, select Filters from the menu. The display will appear as follows:
Two filters are available:

**Current Reading** – Applies to the peak capture rate of the instrument.

**Displayed Reading** – Applies to the primary reading on the display.

Available settings: 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024. It is recommended to keep the current reading filter at its lowest value for best performance, and the displayed reading filter at its highest value for best stability.

---

### 8 SET POINTS

#### 8.1 General Information

Set points are useful for tolerance checking (pass/fail), triggering an external device such as an indicator or alarm in process control applications. Two limits, high and low, are specified and stored in the non-volatile memory of the instrument and the primary reading is compared to these limits. The results of the comparisons are indicated through the three outputs provided on the 15-pin connector, thus providing “under”, “in range”, and “over” signaling. These outputs can be connected to indicators, buzzers, or relays as required for the application.

#### 8.2 Configuration

To configure set points, select **Set Points** from the menu. The screen will appear as follows:

<table>
<thead>
<tr>
<th>SET POINTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper Disabled</td>
</tr>
<tr>
<td>* Upper Enabled 25.0</td>
</tr>
<tr>
<td>Lower Disabled</td>
</tr>
<tr>
<td>* Lower Enabled 22.5</td>
</tr>
</tbody>
</table>

Either one, two, or none of the set points may be enabled.

If two set points have been enabled, they are displayed in the upper left corner of the display. If only one set point has been enabled, the word “OFF” will appear in place of the value. If no set points have been enabled, the upper left corner of the display will be blank.
When set points are enabled, the following indicators are shown to the left of the primary reading:

- ▲ – the displayed value is greater than the upper force limit (NO GO HIGH)
- ■ – the displayed value is between the limits (GO)
- ▼ – the displayed value is less than the lower force limit (NO GO LOW)

Set point indicators and outputs reference the displayed reading, not necessarily the current live load.

8.2 Set Point Outputs Schematic

9 DATA MEMORY AND STATISTICS

The WT3-200 has storage capacity of 1,000 data points. Readings may be stored, viewed, and output to an external device. Individual, or all, data points may be deleted. Statistics are calculated for the data presently in memory.

To enable memory storage, select DATA Key from the menu, then scroll to Memory Storage and press ENTER. Then exit the menu. In the home screen, the data record number 0000 will appear below the primary reading. Press DATA at any time to save the displayed reading. The record number will increment each time DATA is pressed. If DATA is pressed when memory is full the message "MEMORY FULL" will be flashed at the bottom of the display and a double audio tone will be sounded.

To view, edit, and output stored readings and statistics, select Memory from the menu. The screen appears as follows:

9.1 View Data
All the saved data points may be viewed. The record number is displayed, along with the corresponding value and presently set unit of measurement. Any readings may be deleted individually. To do so, scroll
to the desired reading and press **DELETE**. The letter “D” will appear to the left of the record number,
indicating that the tester is in **Delete** mode, as follows:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>0001</td>
<td>24.8 lbF</td>
</tr>
<tr>
<td>0002</td>
<td>22.2 lbF</td>
</tr>
<tr>
<td>0003</td>
<td>24.6 lbF</td>
</tr>
<tr>
<td>0004</td>
<td>18.9 lbF</td>
</tr>
<tr>
<td>D 0005</td>
<td>20.0 lbF</td>
</tr>
<tr>
<td>0006</td>
<td>19.9 lbF</td>
</tr>
<tr>
<td>0007</td>
<td>20.2 lbF</td>
</tr>
</tbody>
</table>

Press **ENTER** to delete the value. To exit **Delete** mode, press **DELETE** again. Any number of readings
may be individually deleted, however, all readings may also be cleared simultaneously. Refer to the **Clear All Data** section for details.

### 9.2 Statistics

Statistical calculations are performed for the saved values. Calculations include number of readings,
minimum, maximum, mean, and standard deviation.

### 9.3 Output Data

Press **ENTER** to output data to an external device. The display will show, “SENDING DATA...”, then
“DATA SENT”. If there was a problem with communication, the display will show, “DATA NOT SENT”. Saved data can be downloaded by Mark-10 data collection programs. Refer to their respective user’s guides for details.

### 9.4 Output Statistics

Press **ENTER** to output statistics to an external device. The display will show, “SENDING STATS...”, then
“STATS SENT”. If there was a problem with communication, the display will show, “STATS NOT SENT”.

### 9.5 Output Data & Stats

Press **ENTER** to output data and statistics to an external device. The display will show, “SENDING DATA”, then “SENDING STATS...”, then “DATA SENT”, then “STATS SENT”. If there was a problem with communication, the display will show, “DATA NOT SENT” and/or “STATS NOT SENT”.

### 9.6 Clear All Data

Press **ENTER** to clear all data from the memory. A prompt will be shown, “CLEAR ALL DATA?”. Select **Yes** to clear all the data, or **No** to return to the sub-menu.

For output of data and/or statistics, RS-232 or USB output must be enabled. Data formatting is
<CR><LF> following each value. Units can be either included or excluded. Output of data via the Mitutoyo
output is possible, however, output of statistics is not. Refer to the **Communications** section for details.

**Note:** Data is not retained while the gauge is powered off. However, the gauge protects against accidental or automatic power-off. If manually powering the instrument off, or if the inactivity time limit for the **Automatic Shutoff** function has been reached, the following warning message will appear:

```
*** WARNING ***
DATA IN MEMORY
WILL BE LOST

CANCEL
POWER OFF
```

If no option is selected, this screen will be displayed indefinitely, or until battery power has been depleted.
10 COMMUNICATIONS

Communication with the WT3-200 is achieved through the micro USB or 15-pin serial ports located at the bottom of the instrument, as shown in the illustration in the Power section. Communication is possible only when the tester is in the main operating screen (i.e. not in a menu or configuration area).

10.1 Installing the USB driver

Caution!
It is recommended that the USB driver be installed before physically connecting the tester to the PC with a USB cable.

For installation instructions, refer to the Mark-10 USB Driver user’s guide, supplied on the Resource CD or downloadable from www.mark-10.com.

10.2 Serial / USB
To set up RS-232 and USB communication, select Serial/USB Settings from the menu. The screen appears as follows:

```
SERIAL/USB SETTINGS
* RS232 Selected
    USB Selected
+ Baud Rate
+ Data Format
```

Select either RS-232 or USB input (output is always simultaneous through both the USB and RS-232 ports). Communication settings are permanently set to the following:

- **Data Bits**: 8
- **Stop Bits**: 1
- **Parity**: None

Other settings are configured as follows:

10.2.1 Baud Rate
Select the baud rate as required for the application. It must be set to the same value as the receiving device.

10.2.2 Data Format
Select the desired data format. The screen appears as follows:

```
DATA FORMAT
* Numeric + Units
    Numeric Only
    Invert Polarity
    Omit Polarity
```

<table>
<thead>
<tr>
<th>Selection</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Numeric + Units</td>
<td>Output format includes the value and unit of measure. Compression values have positive polarity, tension values have negative polarity.</td>
</tr>
<tr>
<td>Numeric Only</td>
<td>Output format includes the value only. Polarity same as above.</td>
</tr>
<tr>
<td>Invert Polarity</td>
<td>Compression values have negative polarity, tension values have positive polarity. May be selected in addition to the Numeric + Units / Numeric Only selection.</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Omit Polarity</td>
<td>Both directions are formatted with positive polarity. May be selected in addition to the Numeric + Units / Numeric Only selection.</td>
</tr>
</tbody>
</table>

### 10.2.3 Data Communication

Individual data points may be transmitted by pressing **DATA**. The WT3-200 will also respond to the following ASCII commands:

- `?` Request the displayed reading
- `MEM` Transmit all stored readings
- `STA` Transmit statistics

All commands must be terminated with a Carriage Return character or with a Carriage Return/Line Feed combination. The tester's responses are always terminated with a Carriage Return/Line Feed.

Any detected errors are reported back by means of error code *10 (illegal command).

### 10.3 Mitutoyo BCD settings

This output is useful for connection to data collectors, printers, multiplexers, or any other device capable of accepting Mitutoyo BCD data. Individual data points may be transmitted by pressing **DATA** or by requesting it from the Mitutoyo communication device (if available). Automatic output of individual data points is also possible. Refer to the **Break Detection** menu for details. To enable Mitutoyo output, select the desired format – either with polarity or without polarity. The screen appears as follows:

```
MITUTOYO BCD
* Disabled
  Ena w/o Polarity
  Ena w/Polarity
```

### 10.4 Analog Output

This output can be used for chart recorders, oscilloscopes, data acquisition systems, or any other compatible devices with analog inputs. The output produces ±1 volt at full scale of the instrument. The polarity of the signal is positive for compression and negative for tension.

### 10.5 DATA Key Functions

The **DATA** key can be configured to perform several functions. To configure the **DATA** key, select **DATA Key** from the menu. The display will appear as follows:

```
DATA KEY
* RS232/USB Output
  Mitutoyo Output
  Memory Storage
```

Three options are available:
### Selection Function when pressing DATA

<table>
<thead>
<tr>
<th>Selection</th>
<th>Function when pressing DATA</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS232/USB Output</td>
<td>Outputs data via the serial and USB ports</td>
</tr>
<tr>
<td>Mitutoyo Output</td>
<td>Outputs data via Mitutoyo (Digimatic) through the serial port</td>
</tr>
<tr>
<td>Memory Storage</td>
<td>Stores a reading to memory (refer to the Memory section for details)</td>
</tr>
</tbody>
</table>

Any combination of the above functions may be selected.

### 11 BREAK DETECTION

#### 11.1 Configuration

Three functions can be triggered automatically upon sample break (break detection), defined as a 50% drop in load from the peak:

1. Transmit the peak reading
2. Save the peak value to memory
3. Zero the primary and peak readings

These automatic functions can help automate and expedite testing processes. If beeps are enabled, an audible tone will sound when the output, storage, and zero functions have occurred. In order for break detection to be active, the appropriate operating mode must be selected. See the Operating Modes section for details. The display will appear as follows:
Any combination of the above functions may be selected.

<table>

</tbody>
</table>

### 11.2 Settings
Set up the trigger for auto output and storage, and the delay to zero the primary and peak readings. The display will appear as follows:

#### BREAK DETECTION SETTINGS
- **Trig. Threshold**: 5%
- **Auto Zero Delay**: 3 sec.

#### Auto Output Settings
Set the percentage of full scale at which the break detection feature becomes active. This threshold is provided to ignore peaks that can occur during sample loading and unloading. Available settings: 5-50%, in 5% increments.

#### Auto Zero Delay
Sets the time delay before the primary and peak readings are zeroed. Available settings: 1-60 sec., in 1 sec. increments between 1-5 sec., in 5 sec. increments between 5-60 sec.

### 11.3 Auto Output Settings
Select the output type. One, both, or no output types may be enabled. The display will appear as follows:

#### AUTO OUTPUT SETTINGS
- **RS232/USB Output**
- **Mitutoyo Output**
12 CALIBRATION

12.1 Initial Physical Setup
The tester should be mounted vertically to a test stand or fixture rugged enough to withstand a load equal to the full capacity of the instrument. The lever mechanism should be removed. Certified deadweights or master load cells should be used, along with appropriate mounting brackets and fixtures. Caution should be taken while handling such equipment.

12.2 Calibration Procedure

1. Select **Calibration** from the menu. The display will appear as follows:

```
CALIBRATION
To invert the display, press the DIRECTION button.
THEN PRESS ENTER
```

2. Press **DIRECTION** to invert the display, if desired. **ENTER** to continue. The display will appear as follows:

```
CALIBRATION
ENTER # CAL POINTS
(1 TO 10)
```

The tester can be calibrated at up to 10 points. Enter the number of calibration points (at least one point must be selected).

**Note:** To achieve the accuracy specification of ±0.2%, it is recommended to calibrate the tester at 5 or more evenly spaced increments, such as 40, 80, 120, 160, and 200 lb loads.

3. To escape the **Calibration** menu at any time, press **ESCAPE**. The display will appear as follows:

```
CALIBRATION
NOT COMPLETE
CANCEL
EXIT W/O SAVING
```

Selecting “CANCEL” will revert back to the Calibration setup. Selecting “EXIT W/O SAVING” will return to the menu without saving changes.

4. After the number of calibration points has been entered, press **ENTER**. The display will appear as follows:
5. Place the tester horizontally on a level surface free from vibration, then press **ZERO**. The tester will calculate offsets, and the display will appear as follows:

   ![CALIBRATION OFFSET](image)

   **Please wait…**

   ![CALIBRATION OFFSET](image)

   **Sen.Offset Adj.Passed**
   **Ana.Offset Adj.Passed**

   **CALIBRATION OFFSET**
   **Sen.Offset Adj.Failed**
   **Ana.Offset Adj.Failed**

   If failed:

6. The following screen appears after the offsets have been calculated:

   ![CALIBRATION](image)

   **Attach necessary weight fixtures.**

   **THEN PRESS ENTER**

   Attach weight fixtures (brackets, hooks, etc), as required. Do not yet attach any weights or apply any calibration loads. Then press **ENTER**.

7. The display will appear as follows:

   ![CALIBRATION](image)

   **Optionally exercise load cell a few times.**

   **THEN PRESS ENTER**

   Optionally exercise the load cell several times (at full scale, if possible), then press **ENTER**.

8. After displaying “PLEASE WAIT…” the display will appear as follows:
9. The display will appear as follows:

CALIBRATION

ENSURE NO LOAD

THEN PRESS ZERO

Apply a weight equal to the full scale of the instrument, then press ENTER.

Remove the load, leave the fixtures in place, then press ZERO.

10. The display will appear as follows:

CALIBRATION

GAIN ADJUST

APPLY FULL-SCALE LOAD

200.0 lbF +/-20%

THEN PRESS ENTER

Use the UP and DOWN keys to adjust the load value as required. The load values default to evenly spaced increments, as indicated by the previously entered number of data points. Apply the calibration load. Then press ENTER.

Repeat the above step for the number of data points selected.

11. After all the calibration points have been completed, the display will appear as follows:

CALIBRATION

COMPLETE

SAVE & EXIT

EXIT W/O SAVING

To save the calibration information, select “SAVE & EXIT”. To exit without saving the data select “EXIT W/O SAVING”.

12. Any errors are reported by the following screens:
Displayed at the start of calibration if a disallowed unit is selected.

Ensure that the load is not swinging, oscillating, or vibrating in any manner. Then try again.

The calibration weight does not match the set value.

The entered calibration point is too close to the previous point.

13 PASSWORDS

Two separate passwords may be set to control access to the Calibration section and to the menu and other keys. To access the passwords setup screen, select Passwords from the menu. The display will appear as follows:

<table>
<thead>
<tr>
<th>PASSWORDS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calibration</td>
</tr>
<tr>
<td>Menu Key</td>
</tr>
<tr>
<td>Mode Key</td>
</tr>
<tr>
<td>Zero Key</td>
</tr>
<tr>
<td>Data Key</td>
</tr>
</tbody>
</table>
13.1 Calibration Password

Select Calibration from the sub-menu. The display will appear as follows:

```
CALIBRATION PASSWORD
* Disabled
   Enabled
   Set Password
   (0000 – 9999)
   5000
```

To set the password, select Enabled, then Set Password. Use the UP and DOWN keys to increment and decrement the value, from 0 to 9999. When the desired value has been selected, press ENTER, then ESC to exit the sub-menu.

13.2 Menu Key Password

If enabled, every time the MENU key is selected, a password must be provided. Select Menu Key from the sub-menu. Follow the same procedure as described in section 10.1.

13.3 Locking Out Other Keys

Other keys may be locked out individually. Select any combination of keys (MODE, ZERO, DATA) by pressing ENTER in the Passwords sub-menu. Pressing a locked key will prompt the message “KEY PROTECTED” and then revert to the previous screen.

13.4 Password Prompts

If passwords have been enabled, the following will be displayed when pressing the MENU key or accessing the Calibration section:

```
ENTER PASSWORD
   (0000 – 9999)
   5000
```

Use the UP and DOWN keys to select the correct password, then press ENTER to continue.

If the incorrect password has been entered, the display will appear as follows:

```
INCORRECT PASSWORD
    Reset password
    Request code:
       XXXX
    Press ENTER or ESC
```

To re-enter the password, press ESC to exit to the home screen. Then, access the desired function and enter the password again when prompted.
If the password has been misplaced, it can be reset. Press **ENTER** to generate a *request code*. The *request code* must be supplied to Mark-10 or a distributor, who will then provide a corresponding *authorization code*. Enter the *activation code* to disable the password.

## 14 OTHER SETTINGS

### 14.1 Automatic Shutoff

The tester may be configured to automatically power off following a period of inactivity while on battery power. Inactivity is defined as the absence of any key presses or load changes of 100 counts or less. To access these settings, select **Automatic Shutoff** from the menu. The display will appear as follows:

```
AUTOMATIC SHUTOFF
* Disabled
   Enabled
   Set Minutes
      5
```

Select **Disabled** to disable automatic shutoff. Select **Enabled** to enable it. The length of time of inactivity is programmed in minutes via the *Set Minutes* parameter. Available settings: 5-30, in 5 minute increments.

**Note:** If the AC adapter is plugged in, the tester will ignore these settings and remain powered on until the **POWER** key is pressed.

### 14.2 Backlight

Several initial settings are available upon powering on the tester. To access these settings, select **Backlight** from the menu. The display will appear as follows:

```
BACKLIGHT
 Off
 On
* Auto
   Set Minutes
       1
```

Select **Off** for the backlight to be off upon powering on the tester.

Select **On** for the backlight to be on upon powering on the tester.

Select **Auto** for the backlight to be on upon powering on the tester, but will shut off after a period of inactivity (as defined in the **Automatic Shutoff** sub-section). The backlight will turn on again when activity resumes. The length of time of inactivity is programmed in minutes via the *Set Minutes* parameter. Available settings: 1-10, in 1 minute increments.

**Note:** If the AC adapter is plugged in, the tester will ignore these settings and keep the backlight on. Selecting the **On** or **Off** setting in the **Backlight** menu will manually turn the backlight on or off.

### 14.3 LCD Contrast

The contrast of the display may be adjusted. Select **LCD Contrast** from the menu. The screen will appear as follows:
Press ENTER to modify the contrast. Select a value from 0 to 25, 25 producing the most contrast.

14.4 Beeps
Audible tones can be enabled for all key presses and alerts, such as overload, set point value reached, etc. The Set Point alert can be configured to be either a momentary tone or a continuous tone (until the load is restored to a value between the set points). To configure the functions for which audible tones will apply, select Beeps from the menu. The screen will appear as follows:

14.5 Initial settings
This section is used to configure the initial settings upon powering on the tester. The initial units of measurement and the primary reading measurement mode may be configured. To access these settings, select Initial Settings from the menu. The screen will appear as follows:

The default values are lbF and Real Time.

14.6 Information / Welcome Screen
The following screen is displayed at power up and can be accessed at any time by selecting Information from the menu:

Wire Terminal Tester
Series WT3
Model No: WT3-200
Serial No: 1234567
Version: 1.0
(c) Mark-10 Corp.

Mark-10 Corporation has been an innovator in the force and torque measurement fields since 1979. We strive to achieve 100% customer satisfaction through excellence in product design, manufacturing and customer support. In addition to our standard line of products we can provide modifications and custom designs for OEM applications. Our engineering team is eager to satisfy any special requirements. Please contact us for further information or suggestions for improvement.
